

Import RSS Feed Client project

1. Select File → Import... from the menu
2. Select General -> Existing Projects into Workspace
3. Select Archive File -> Browse -> and select the zip file "RSSFeedClient.zip"

4. Finish
 - ⇒ Project is imported in Package Explorer view
5. Open the source file with Package Explorer and take a quick look at the code
6. Run the project : Right-click on the project -> Run As -> Java Application
 - ⇒ RSS Feeds are printed in the console
7. Debug the project: Set a breakpoint in main() method of RSSReader class by double clicking the left edge of the source editor
8. Right-click on the project -> Debug As -> Java Application
 - ⇒ Control of the program is stopped at main
 - ⇒ Workbench switches to Debug perspective
9. Step over/ Resume the code
10. Remove the breakpoint set manually at main: Go to Breakpoints view and delete the breakpoint
11. Terminate debug session
12. Open 'Debug Configurations...' from Run menu
13. Notice that Eclipse has created a debug configuration named RSSReader
14. Explore debug options from the configuration
15. Go to Main tab and select 'Stop in main' and click Debug
 - ⇒ Program is stopped at main without having an user breakpoint there
